Portfolio | Mumbai, Maharashtra

PROFESSIONAL SUMMARY

Software Engineer who builds and runs production full-stack systems for fintech and marketplace products. At Aerem, a solar-financing marketplace, built the tools ops, finance and sales run on daily: a dispatch planner that replaced a hand-run spreadsheet, payment and ledger fixes worth over **INR 2 Cr**, the company's first distributed tracing, and Postgres fixes that made key screens **10–69× faster**. Before that, built RAG and LLM backends on AWS at Schbang. Author of two open-source npm packages, **codeloom** and **create-rigel**. **AWS Certified Developer – Associate**.

EXPERIENCE

Jul 2026 – Present

Software Engineer • Aerem Solutions Mumbai, Maharashtra

Stack: TypeScript • AdonisJS • Next.js • React • FastAPI • PostgreSQL • Redis • RabbitMQ • OpenTelemetry • Grafana • Zoho

- **Built a Dispatch Planner from scratch** (Next.js, AdonisJS, PostgreSQL), moving ops' open-order tracking off a hand-run spreadsheet onto a live multi-user tool; cut its report query from **455 ms to 8.5 ms**.
- **Made prod Postgres queries 10–69× faster** using pg_stat_statements and 8 new indexes, with identical results verified across 48 scenarios.
- **Made bank collections double-post-proof** with idempotency keys and retries; auto-matched **INR 49.1 lakh** of payments and shipped ICICI multi-bank collection.
- **Fixed crore-scale ERP data errors:** removed ~**INR 2.13 Cr** of duplicated credit notes caused by a race, and stale balances on 73 of 235 vendors.
- **Created Aerem's observability platform** and the `@aerem/telemetry` npm SDK (OpenTelemetry, Grafana): first distributed tracing, and an end to a 298-false-alert storm.
- **Fixed a prod out-of-memory outage** (150 leaked Chromium processes) with a pooled browser, a Redis concurrency cap, backoff and a DLQ.
- **Rebuilding the field Sales App** solo on Next.js 16 and React 19 with httpOnly BFF sessions; shipped 16 of 32 roadmap features in ~2.5 weeks and closed a login CSRF.
- **Built a warranty self-service platform and OCR service** (FastAPI, Google Cloud Vision, OpenCV) that verifies solar-panel serial numbers from photos.
- **Completed Zoho ERP sync** for all 7 Purchases modules with HMAC-verified webhooks and checkpointed, rate-limited backfills.
- **Delivered Microsoft Entra SSO across 4 services**, GST-verified checkout and a solar-kit builder; built a buy plan that prevented a 78,948-unit over-order.

Jun 2025 – Jul 2026

Software Engineer – Full Stack • Schbang (Schbang Labs) Mumbai, Maharashtra

Stack: Python (FastAPI) • LLMs • RAG • Vector Databases • Node.js • PostgreSQL • Redis (ElastiCache) • AWS (EC2, RDS, S3, SQS, SNS, Lambda, CloudWatch) • Docker • GitHub Actions CI/CD

- **Architected an end-to-end production RAG pipeline** (FastAPI + vector database) for Second Brain: chunking, embedding and semantic search over **200+ brand assets**, cutting client onboarding from 2–3 weeks to 2–3 days (**70% reduction**).
- **Engineered an LLM resume-screening backend** processing **500+ candidates per cycle at 92% scoring accuracy**, integrated with an ElevenLabs voice-interview step; the hiring cycle fell from 21 days to 2–3 days.
- **Orchestrated an event-driven AWS pipeline** (SQS/SNS/Lambda) chaining Whisper ASR, dedup and LLM summarisation for Google Meet transcripts: **95% transcription accuracy**, processing cut from 2 hours to under 5 minutes.
- **Cut LLM-serving API latency** from 500–800 ms to **sub-200 ms** with Redis (ElastiCache) and RDS read replicas and reduced AWS spend ~**20%** on LLM workloads; owned 12 production features end to end with zero unplanned rollbacks.

OPEN-SOURCE PROJECTS

codeloom – Feature Maps for Engineers and AI Agents | github.com/Shreyas1015/codeloom • npm | Nov 2026

- **Problem:** in apps split across frontend and backend repos, no one can quickly answer "what happens when a user clicks this?", and AI coding agents guess. codeloom traces each page to the API route, code and database tables behind it, across repos, without using AI.
- **How it's used:** engineers open the map in a local dashboard, and Claude Code or any MCP agent reads it to name each feature, walk a new engineer through it with a guided tour and quiz, and flag features that have no spec.
- **Why it can be trusted:** every link is marked exact or a guess, and CI checks the map against hand-labelled apps and blocks a release below **95% precision / 80% recall**; code never leaves the machine.

create-rigel – Guardrails for AI-Written Code | github.com/Shreyas1015/create-rigel • npm • **5.8k+ downloads** | Jul 2026

- **Problem:** code written by AI agents drifts from a team's architecture and quality bar. create-rigel starts a new project (Next.js, Express, NestJS or FastAPI) with automatic gates that block any commit that breaks the rules: type errors, lint warnings, circular imports, layering violations or low test coverage.
- **How it's used: 5.8k+ npm downloads**, and it became the basis of Aerem's internal AI delivery harness, where each change goes from spec to a gated build before review.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL

Backend: Node.js, AdonisJS, Express.js, FastAPI, REST APIs, Webhooks (HMAC), RabbitMQ, Microservices, Event-Driven Systems

Frontend: Next.js (App Router), React, TanStack Query, Zod, Tailwind CSS, shadcn/ui

Databases: PostgreSQL (indexing, EXPLAIN tuning, pg_stat_statements), MongoDB, Redis (ElastiCache, Redlock), Vector Databases (Pinecone)

AI / LLM: RAG, LLM APIs, Semantic Search, MCP Servers, Claude Code & Agentic Dev Tooling, Prompt Engineering

Cloud & Observability: AWS (EC2, RDS, S3, SQS, SNS, Lambda, ElastiCache, CloudWatch), GCP Cloud SQL, Vercel, Docker, GitHub Actions, OpenTelemetry, Grafana, Prometheus, Loki, Tempo

Integrations & Testing: Zoho Books/Inventory, Microsoft Entra (OAuth2/OIDC), Axis & ICICI bank APIs, IDfy, Google Cloud Vision; Vitest, Playwright, MSW

CERTIFICATION

Feb 2026 – Feb 2029

AWS Certified Developer – Associate • Amazon Web Services

- Validates production cloud development expertise: serverless architectures (Lambda, API Gateway), CI/CD automation, IAM security, and AWS service integration.

EDUCATION

Jun 2021 – May 2025

Bachelor of Engineering – Computer Engineering • Vasantdada Patil College of Engineering Mumbai University

Mumbai, Maharashtra • CGPA: **7.75** / 10
